NOTE.—The great majority of females engaged in rural occupations are employed in conjunction with domestic duties, very few being returned as working for wages. Since 1919 a more careful collection has been made of the number of females engaged in rural pursuits, and it would appear that previously about 12,000 females were included each year (e.g., wives of the proprietors) who were engaged wholly in domestic duties. The number of females quoted in the above table for years prior to 1920 represents, therefore, the number as returned, less 12,000.

No. 53.—New South Wales Wheat Harvest, 1928-29.

The figures were compiled from returns made after the crops had been harvested, and furnished by each of the 16,970 wheat-growers of the State.

The area sown for grain was 4,076,600 acres, including 213,570 acres which failed entirely, and the grain harvested amounted to 16,394,200 bags, equivalent to 49,182,600 bushels, or an average of 12.1 bushels per acre.

The area sown for hay was 377,100 acres, including 13,010 acres which failed, and the production of hay was 392,790 tons, or an average of 1.04 tons per acre.

The area fed-off profitably—that is, with a green food value of 15s. or more per acre, was 16,400 acres; the area fed-off with a green food value of less than 15s. per acre has been included with the area which failed entirely. The total area sown with wheat was 4,470,100 acres.

In January, from an estimate based on earlier returns supplied by growers, it was anticipated that the yield for grain would be 49,798,200 bushels, but the actual harvest was 615,600 bushels or 1.2 per cent. below the estimate.

The crop was 40 per cent. above the average yield of the preceding ten years. The highest yield was obtained in the North Western Slopes—15.5 bushels per acre; the Northern Tableland produced 15.1 bushels per acre, and the South Western Slopes 14.1 bushels per acre. The Central and Southern Tablelands produced 13.9 and 12.8 bushels per acre respectively, and the Central Western Slope 11.3 bushels per acre. In the North Central Plains and the Riverina the production was 10.3 bushels per acre, and in the Central Plains 10 bushels.

Of the total area harvested for grain, including the area which failed entirely, 192,865 acres were sown on new land, 2,010,751 acres on fallowed land, and the balance, 1,872,938 acres, on stubble; the respective productions of grain were 6.5 bushels, 13.9 bushels and 10.6 bushels per acre.

The following table shows the actual results of the harvest in the principal divisions of the State:—

No. 56.—Estimates as to Sheep and Wool, 1928-29.

At 31st December, 1928, there were approximately 52,700,000 sheep and lambs in the State as compared with 48,920,000 a year previously—an increase of 3,780,000.

Approximately 50,300,000 sheep and lambs were shorn or reserved for autumn shearing in the current season (1928-29), yielding approximately 441,000,000 lb. of greasy wool, giving an average clip (including estimated crutchings) of 8.8 lb.

This total is 36,000,000 lb., or 9 per cent., greater than in the previous season, and has only once been exceeded, viz., by a record total of 456,870,000 lb. of wool shorn in 1926-27.

The totals for the present year compare with those of previous years as follow:—

Year ended 30th June.	Number of sheep and Lambs shorn.	Average weight of wool clip (greasy) Sheep and Lambs.	Weight of Wool produced.		
			Shorn, Crutched and Dead.	Derived from or exported on skins.	Total.

1929	50,300	8.8	446,090	36,830

The approximate value at Sydney of the wool clip (exclusive of the value of wool derived from or exported on skins) was approximately £31,100,000, as compared with £33,000,000 in 1927-28, £32,650,000 in 1926-27, and £25,980,000 in 1925-26.

The number of sheep in the State has fluctuated as follows in recent years:—
